The Zoeller Smart-Pak Plus Residential Alternator System allows you to use 2 automatic sump or sewage pumps in a residential duplex system. The Smart-Pak Plus allows you to plug two 1/2 hp 115V, 12 amp max. automatic sump or sewage pumps into the control. The control then alternates starting of the pumps. If a pump fails, the second pump will come on, and the alarm will activate when a pump fails to start. The alarm has a warning light and sound alarm. The indicator lights indicate power to the pump, which pump is operating and the alarm status.

The Smart-Pak Plus is easy to install. Install the control unit on the wall near the pumps where the cord length will reach. Install the alarm on the discharge pipe in the basin above the point where the pumps should be on, and below the inlet for the water. Plug the alarm float switch cord and pump cords into the appropriate places on the alternator. Plug the power cord into the properly grounded outlet. Plug the alarm into a separate grounded outlet, a circuit separate from the pumps.
